

Write this title in your homework book: Adaptation, Inheritance and Evolution

[Read each learning guide](#): What is adaption? What is inheritance? What is evolution?

Tasks

One (days 1 and 2)

Write this subheading: Key Vocabulary

Then, create a table like this to go under your subheading.

Adaption	Inheritance	Evolution
<i>habitats</i>	<i>characteristics</i>	<i>theory of natural selection</i>

Each guide contains key vocabulary related to the subjects of adaption, inheritance and evolution. Can you identify the key vocabulary and record it in your table? I have written some examples to get you started.

Two (days 3 and 4)

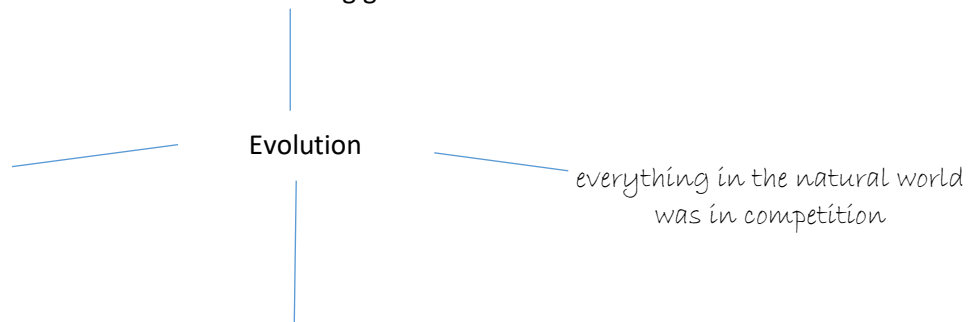

Now write this subheading: Key Facts and Ideas

Can you find key facts or ideas in the guides? Tip: find phrases within larger sentences

e.g. He also noticed that *everything in the natural world was in competition*

Create a mind-map of key facts or ideas for two of the learning guides

e.g.

Three

Finally write this subheading: Learning Guide Rewrite

Imagine the BBC has asked you to rewrite the wording for one of the learning guides, but this time, they will only allow a maximum of 50 words.

- Pick one topic to write about
- Write a paragraph that will replace the writing for that guide
- Use your own words
- Use the key vocabulary, ideas and facts you have collected to help you (you may not need all of them)

Tips: don't go into too much detail. Think carefully if you are going to use examples. Using lists may help.
