

w/c 22nd February

L/O – I can describe the properties of different materials.

foil

shiny fragile
weak waterproof
flexible smooth

paper

fabric

Metal e.g. cooking tray

wood e.g. bread board

plastic (cutting board)

Eric the Knight wants to design a shield to use in battles. He is unsure which material to use for his shield. Look at each material. Use your sense of sight and touch to investigate the properties of each material. Describe each material using adjectives/property words. The first material has been completed as an example.

Which properties will a shield need to be effective?

Which material do you think will make the best shield to give to Eric?
