

Curriculum Tasks - WB 1-3-21

Remember to do these jobs in your home learning book.

PSHE

Write a letter telling us what you have loved about being at home during this Lockdown and what you have found tricky. Tell us what you are most looking forward to and any worries that you have about coming back to school. That makes four paragraphs of writing team! Please email this work to us - we would like to read your letters before Monday 8th March.

PE

This half term we are learning about Outdoor Adventures, orienteering and exploring our home environment.

Choose one activity from the sheet saved on our website every week.

Geography

LO: I can research a mountainous city

Next week we will be comparing Lhasa (a city in Tibet) to Ely! Get a head start for your first day back by research Lhasa. Some things you may want to research:

Location, population, climate, religion, architecture.

Why do you think people choose to live near mountains?

Art

Last week we spotted flowers in the nature garden for the first time this term. We saw crocuses and snowdrops and just had to have a go at drawing them! Go on a hunt for early Spring flowers, perhaps combine this with your PE task this week! Have a go at sketching any you find. Can you identify them?

Science

LO: I can explain the functions of the digestive system.

Watch the **Operation Ouch! Digestion** video saved on our website to learn about how the different parts of our digestive system help to digest food through our bodies. You could also have a look at the BBC Bitesize link on our website which helps to explain more about our digestive system.

Once you have finished this, use the activity sheets saved on the website to complete a labelled diagram of our digestive system, explaining its different functions. Read the explanation text first and then use this information to help you label the digestive system.

As an extra activity there is also a digestive system word search saved on the website if you'd like to have a go!
